

# Medtech Connect brings remote health into the Evolution PMS

**Medtech Connect** is so much more than a video call with a GP. With superior telehealth features and integrated digital monitoring devices, clinicians can keep connected with their own patients and make informed decisions with up-to-date clinical readings during virtual consultations.

If you're using Medtech Evolution, you're ready to start booking comprehensive consultations with your patients, no matter where they are, without leaving your clinic. You don't need any new software or apps. The Medtech Connect virtual consultation opens right in Evolution, and you'll have access to all your patient information as well as the clinical data recorded on our digital monitoring devices.

## Key benefits

- **Continuity of care**  
Extends the existing relationship between GPs and their patients, and keeps patients connected to their own GP.
- **Plug and play**  
Medtech Evolution clinicians don't need any new software or apps and patients, care teams or families can join a consultation on any standard mobile device.
- **Real-Time Collaboration**  
With healthcare teams and family in a virtual consultation.
- **Shared Care**  
Nurses and caregivers can use mobile devices to capture and transmit vital signs and other clinical data from anywhere.
- **Alerts**  
Automatic alerts assigned to stakeholders when out-of-threshold clinical parameters are detected.

## Delivering continuity of care

Medtech Connect gives your patients a virtual consultation that's more like a face-to-face appointment with the option to remotely record the detailed clinical information, images and audio you'd expect to capture in a face-to-face consultation.

## Shared care

Medtech Connect makes it easier for practices, clinics, and health services—like aged care, community outreach and marae health centres—to share the delivery of care.

Nurses, caregivers or the patient's family can deliver in-home monitoring with our integrated, easy-to-use digital devices.

Practices can offer in-person appointments with nurse practitioners or other clinicians working alongside an on-site or remote GP.

## Real-time collaboration

Medtech Connect's virtual continuity of care can help reduce patient wait times, emergency department presentations and triage acute cases for urgent care before they present at the practice, clinic or health service.

With Medtech Connect clinicians can provide informed consultations and ongoing care for all patients in the community - no matter where they are or how often they need to be seen.

## Plug and play with Medtech Evolution

Medtech Evolution is all you need to share a live consultation with clinicians, caregivers, and family across several locations.

Integrated, easy-to-use monitoring devices automatically upload readings to the patient record in Evolution, with alerts to the GP or nominated clinician based on pre-set patient thresholds.

### Monitor vitals with one compact device:

- Blood pressure
- Temperature
- Pulse and oxygenation
- Blood glucose
- Single-lead ECG

### Or capture audio and images with a suite of integrated devices:

- Throat scope
- Otoscope
- Digital stethoscope
- Bluetooth-enabled urine analyser
- Wound monitoring guide

Medtech Connect devices make it easy for patients to self-monitor or for family, nurses, and communities to remotely monitor using a standard mobile device from any location.
