

Medtech32 pre-release documentation

Funding switchover to NES

CPI (Clinical Performance Indicators) Extract

Summary of Change

Changes made to the CPI Extract reporting to include additional patient identifiers (Patient External ID (NHI) and NES Enrolment ID) that will enable the data to be more easily used in conjunction with other datasets.

CPI Extract Enhancements

Changes to the CPI extract have been made to enable the data to be more easily used in conjunction with other datasets. The following summary outlines the changes made:

- A new optional Patient element has been introduced for **NES Enrolment ID**.
- An existing element, **Patient ID (external ID)** has been changed from Not Used to **Optional**. This element will be populated with the patient's **NHI**.
- If a value is not present for **NES Enrolment ID** or **Patient ID (external ID) - NHI**, then the corresponding placeholder for the data will be blank.
- The PHO Clinical Event Export version will be updated to v5.6

Release Documentation

Full release notes and a webinar will be provided, along with a series of FAQ's in the Insight Knowledge Base at the time of release of these changes for all Medtech32 practices.

Practices should ensure that all relevant staff within the practice are aware of the changes made to the Medtech32 application to support the Ministry of Health Funding switch-over to NES.
